Year report 2013

In front of the reader is the year report 2013 of the foundation SMILES FOR MOLDOVA. (SfM). De financial report is available on request..

The foundation Smiles for Moldova has one of the goals to collect financial means for the implementation and support of the care in the Centre for maxillofacial prosthetics in the Oncologic hospital in Chisinau after the construction and opening in 2010.

The yearly workshop was organised from Monday 25 November till Thursday 28 november from 10:00 am till 16:00 a.m.
In the morning from 8:00 till 10:00 a.m. Dr Valentina Luca had clinical office for hospital patients and Dr Rodica Mindruta had lectures for medical students in general medicine.

In the workshop The team of the prosthetic service, (Dr Rodica Mindruta, surgeon Dr Valentina Luca, stomatologist/prosthodontist, mr Ivan Vilca, prosthetic technician and Olga, prosthetic assistant ; in total four different disciplines) presented and discussed and treated 17 patients in 31 appointments, divided over 15 new ocular patients, one follow-up facial prosthesis (combined) and on new facial prosthetic patient (ear).

The conclusion of the workshop in the prosthetic service of PMSI is:

- 1 There is an excellent cooperation between the four disciplines in this multidisciplinary team.
- 2 The head of the prosthetic service realized an excellent organization of healthcare with an appointment system. The waiting time of the patients is very limited, which is extraordinary for healthcare in Moldova.
- 3 The quality of the patient care is high, already in 3 years time reaching to the prosthetic service in The University Medical Centers in The Netherlands.
- 4 The concern for the presenters of the service from the Netherlands is that there is a declining referral by the department of Oncological Surgery of the PMSI. Which for us is surprising, while we organised this service from 2007 to 2010 in cooperation with the Head of the department Georghe Tsibirna and the direction of the PMSI oncological Hospital. Dr. Van Oort, presented this fact already in the medical Conference "Moldmedizin" In Chisinau (September, 2012). On behalf of all participants in the prosthetic service project PMSI Dr. Van Oort presented the construction of this prosthetic Center from 2007 – 2012. see the extension. We discussed this finding with the Head of the department Prof tsibirna.
- 5 The quality and level of the patient care and results in the prosthetic service is so high that our prospect is that this service can be a Center of excellence for

postgraduate courses in the near future. Preconditioned that the multidisciplinary cooperation stay together.

Summary of the treated patients:

Total treated patients with defects of the OMF Prosthetic Service PMSI - Moldova			
	2010-2011	2012	2013
ocular	20	54	50
